9 April 1975

MEMORANDUM FOR:

25X1A

SUBJECT: IR&D Data Machine Processing

1. Many thanks for your draft paper on the above. Your excellent comments, observations, and recommendations were coupled with those received from OMB and served as background material for preliminary discussions with Al Albrecht and Mort Goulder. As you know, Dr. Currie has tasked Mort Goulder to review the present documents with an eye towards recommending needed format changes, content improvement, establishing a finite data for submissions, etc.

2. It is expected that Mort will convene a community group on an ad hoc basis in early May. This group will also address, as best it can, the type of analysis, trends, etc., that can usefully be extracted from the basic data. The key to all of the above, of course, is your commitment to handle/administrate the machine processing aspects. Hence, I ask that you or  participate with me in Mort Goulder's ad hoc committee when formed.
